

Call for abstract submission to EGU 2019 session on

MONITORING, ASSESSING AND INCREASING THE IMPACT OF ENVIRONMENTAL AND THE EARTH SYSTEM RESEARCH INFRASTRUCTURES

***Deadline:
10 January 2019***

This session aims at discussing how to best monitor, interpret, and assess the efficiency and impact of environmental and Earth system research infrastructures. Even more importantly, the session seeks a breadth of contributions, with focus on ways to increase and improve the impact of research infrastructures, not only through the scientific outcomes they produce, but also, for example, through increasing the number of touchpoints with other actors in the society, or awareness of the services they offer- whether this is enhanced by lobbying, direct cooperation with industrial partners, or any other action. Talks on how to enhance the impact through the strategic communications activities are especially welcome.
